MARITIME HACKATHON MARINEHÄKK

Rasmus Hirtentreu

MarineHäkk Project Manager

Taltech Estonian Maritime Academy

14.01.25

WHY MARINEHÄKK?

- Innovation-oriented, fast-growing and science-based spin-offs (start-ups and spin-offs) have become popular and have begun to operate
- Innovation is an important component of modern entrepreneurship, especially when we talk about technology-based business and product development
- Maritime including shipping is a very technical field, but unfortunately still very conservative today
- The expected result of MarineHäck is to find fundamental conceptual solutions to the challenges that need to be solved

WHAT IS MARINEHÄKK?

- MarineHäkk is a hackathon aimed at creating new innovative and practical green technology-based solutions for the maritime Industry
- We offer the platform of intense brainstorming day with the support of top mentors & experts in the field – helping maritime professionals and enthusiasts to work on their idea
- We welcome engineers, developers, designers, business people, marketers and activists to build teams and explore solutions together
- As a result of joint brainstorming, teams reach practical results, create companies around ideas and/or use the experience gained as input for planning research topics too.
