

TALLINN AIRPORT GREEN INFRASTRUCTURE

Tallinn Airport has set a goal to achieve carbon neutrality by 2025 and climate neutrality by 2030. To reach this, several environmentally friendly measures have been implemented, including the establishment of solar parks, the adoption of renewable energy, and the phasing out of fossil fuels. Additionally, it is planned that by 2030, all airport operations will be zero-emission. With these steps, the airport aims to reduce its environmental impact and serve as a model for promoting sustainability.

- Within the framework of the CleanTech HUB being established in Estonia, it is possible to consolidate knowledge and resources to foster innovation and the adoption of green technologies, including the integration of hydrogen technologies in the transport sector.
- The collaboration between Tallinn Airport, TalTech, and the CleanTech HUB creates a strong foundation for developing sustainable and innovative solutions that contribute to achieving Estonia's green transition goals.
